

ABSTRACT OF THE DISCLOSURE

A seal structure of a door mirror mounting portion according to the present invention is constituted by a mirror base portion mounted to a door panel, a seal member held between the mirror base portion and the door panel, and a weather strip provided in the door panel and sealing between the door panel and a front pillar. A surface of the door panel to which the mirror base is mounted is offset to an inner side of the room from a general surface other than the door mirror mounting portion, and the seal member is extended to a side of the front pillar so as to be brought into contact with the weather strip and close between the mirror base portion and the front pillar. The mirror base does not protrude to a side portion of the vehicle, thereby improving an appearance, and an air stream in the portion becomes smooth at a time of traveling the vehicle, so that it is hard to generate the strong wind noise and the peeling in the end portion of the seal portion.
